

## Important: Math Facts Practice!

We are getting to the point in our curriculum where basic math facts need to be mastered and memorized in order for students to be able to complete their work quickly and efficiently.

We have been practicing addition and subtraction facts in class daily, but I would love to see students continuing to practice them at home as well – primarily for speed and automaticity.

Attached is the first addition fact worksheet (as listed on the weekly homework packet for Wednesday.) Please set a timer and have your child complete the facts as quickly as possible. Record the time at the top of the page on the “score” line. After checking for correct answers, please circle any that are incorrect.

I will record students’ times when I check the homework packets each week and will celebrate each child as his/her time decreases! It will be fun to watch our class get faster and faster at basic facts!

As always, thanks for your support at home!  
Mrs. Nelson
